BeliefKV: Coordinating Dynamic Agent Execution and KV

Observed dependencies → near-future demand → KV lifecycle → native admission

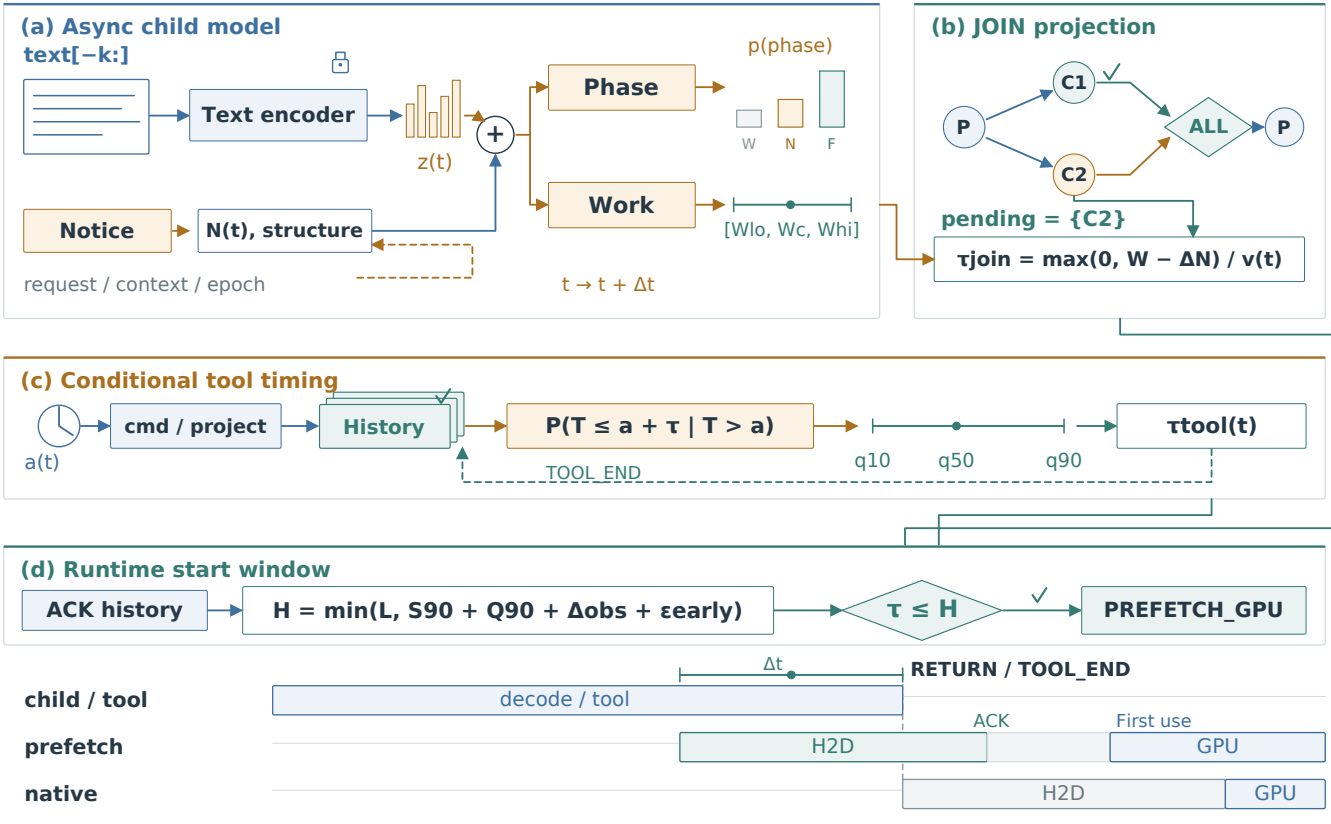

BeliefKV：动态 Agent 执行与 KV 协同管理

已观测依赖 → 近期执行需求 → KV 生命周期 → 原生准入

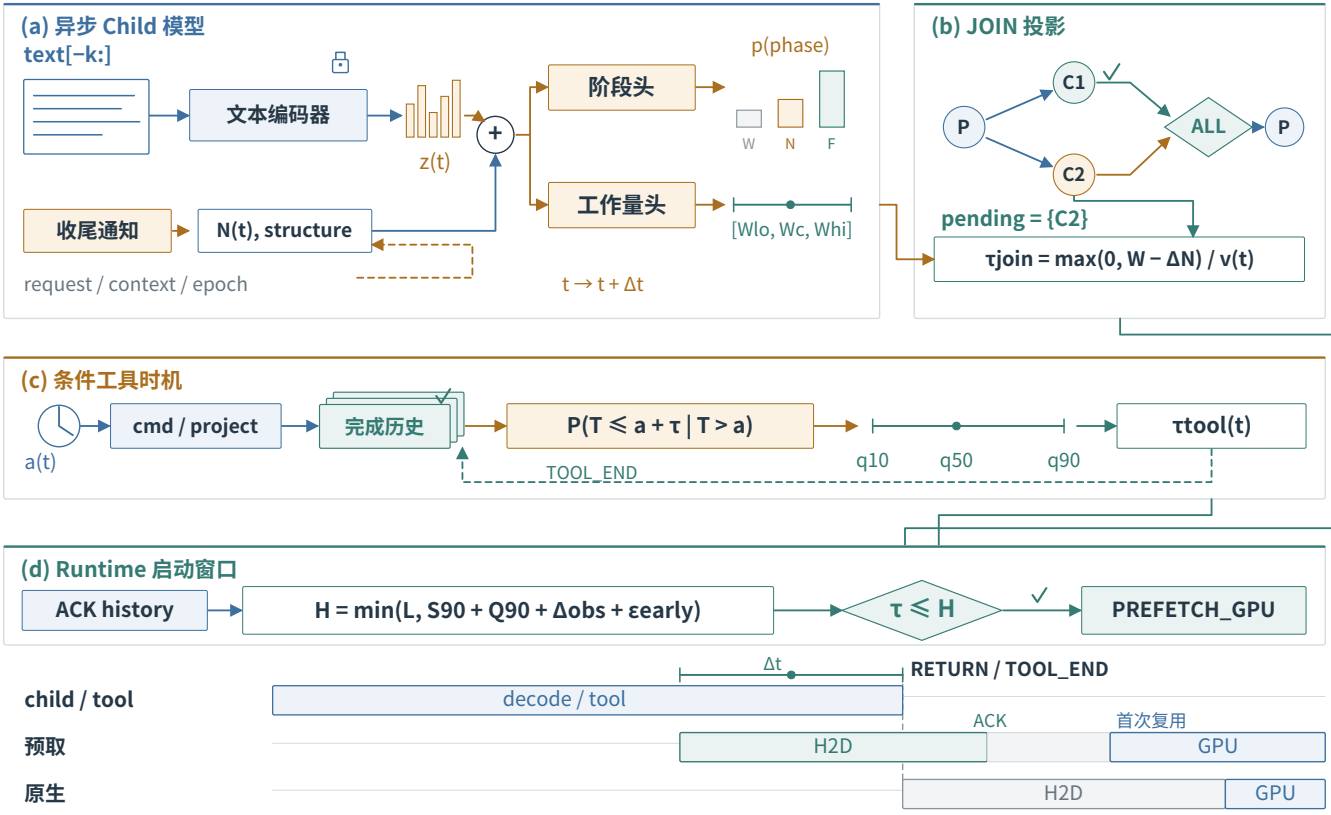

Predicting the Next Execution Demand

Text + events + progress → stage / work → JOIN or tool reentry

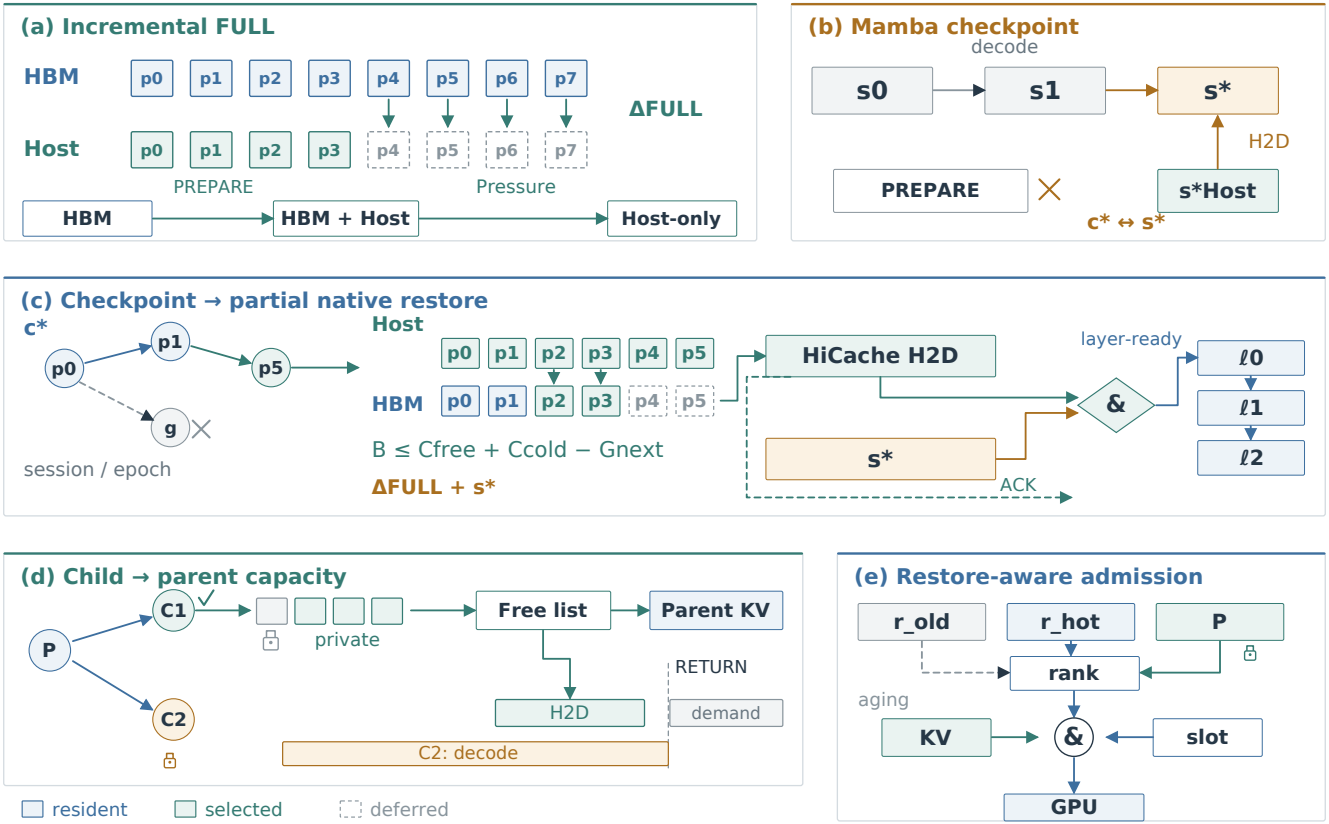

事件与内容驱动的执行需求预测

正文 + 事件 + 进度 → 阶段 / 剩余工作 → JOIN 或工具返回

KV Lifecycle, Page Migration and Timely Consumption

Incremental backup → pressure reclaim → partial restore → native execution

工作流感知的 KV 生命周期与恢复感知准入

增量备份 → 压力回收 → 部分恢复 → 原生执行
